

# SILVER BLOOD

## THE NEXT GENERATION ERA ONLY, POST-2374

In its natural state, the Silver Blood is a biomimetic metallic fluid found on a Class Y demon planet in the Vaskan sector of the Delta Quadrant. Made of deuterium and dichromates, the Silver Blood is able to mimic any biological entities and technology that it comes into contact with, copying memories, personalities, and even computer programs perfectly. The Silver Blood became sentient for the first time when the crew of the U.S.S. Voyager encountered it in 2374. The deuterium lifeforms copied Voyager and her crew. Soon after, the Silver Blood copies left the demon planet, believing themselves to be the original crew of Voyager. Disaster struck when subspace radiation from an enhanced warp drive destabilized them, and the ship and all aboard were lost. However, that ill-fated ship and crew may not be the only copies that exist, and other lifeforms and technologies may have been copied by the Silver Blood.

**EXAMPLE VALUE:** *Duplicate Or Not, I Am Real.*

- **ATTRIBUTES:** As the origin species.
- **TRAIT:** Silver Blood. In addition to species traits from the origin species, Silver Blood duplicates also exhibit native resistance to Class Y demon planet conditions. They are almost indistinguishable from the original, but may be identified as Silver Blood via a dichromate catalyst. They are also susceptible to nadiion radiation and certain types of subspace radiation that would normally be harmless, such as those emitted by enhanced warp cores. Exposure causes molecular cohesion and acute cellular degradation. Renewed contact with the original may re-stabilize their form. Over time, Silver Bloods risk forgetting that they are copies.
- **TALENTS:** The character receives access to all talents of the origin species. A Silver Blood character must select the Demon Planet Origin talent during character creation.

## DEMON PLANET ORIGIN

**REQUIREMENT:** Silver Blood, must be taken at some point at Character Creation.

You are a biomimetic deuterium lifeform originating from a Class Y demon planet, and can survive in harsh conditions such as dense, toxic, and highly corrosive atmospheres, surface temperatures that exceed 200 C, and thermionic radiation. You do not require a suit to survive on a Class Y planet. Newly-created Silver Blood copies can only breathe Class Y atmosphere at first, requiring 2d20 days before they gain an adaptation to the atmospheric mix required by the origin species.
