

ALIEN MIDDLE SCALE COMPARISON CHART

SIZE ANALYSIS FOR ALIEN SHIPS OF SCALE 2 TO 9

This is my Scale estimates of the ships in the Eaglemoss Alien Starships picture (posted on the Wixiban website as of March 2021). The ships below are listed in rough order by horizontal order, starting from the top left of the page (so left-to-right, line-by-line, just like reading a page of text). My rough sense of Scale is as follows:

Ship Length	Scale
0 to 20 meters	1
20 to 100 meters	2
100 to 240 meters	3
240 to 400 meters	4
400 to 600 meters	5
600 to 800 meters	6
800 to 1400 meters	7
1400 to ~1800 meters	8
More than 1800 meters	9+

Keep in mind, these are NOT exact numbers! (Y'know, obviously.) I had to eyeball each and every ship in all three pictures and decide if they had sufficient mass to qualify as a particular Scale or another. A few ships had a thin, needle-like design that, while they had a sufficient length to qualify as a higher Scale, they didn't look as if they had the sufficient mass for that Scale; thus, I had to downgrade them in Scale. I found a number of ships that struck me as being right on the borderline of adjacent Scales, so I had to make a judgment call (sometimes based on additional factors where available) as to which Scale those ships belonged.

A detailed discussion of my approach to Scale is in the Federation Middle Scale document.

What's with the Warbird?

You'll likely notice a supposed discrepancy right off: the Romulan *D'deridex*-class Warbird and its Scale of 7 instead of 6 in the corebook rules. This is for several reasons:

1. The original corebook assumed the *D'deridex* was roughly only 1,000 meters long, rather than its official length of 1,353 meters which is almost twice the length of a *Galaxy*-class.
2. Even though the *D'deridex* has a lot of empty space in its center, it still seems to outmass a *Galaxy*-class, so much so that I was never convinced that a fight between a *Galaxy* and a *D'deridex* would be an even fight.
3. A *D'deridex* is almost as large as *Deep Space 9*, so claiming a fight between a *Galaxy* and a ship almost large enough to match a space station known to fight off entire fleets would be an even fight seems particularly ridiculous to me.

Klingon Bortasqu'-class (Star Trek Online)

Scale 7

1,126m in length

Klingon Battlecruiser D7-class (TOS)

Scale 4

228m in length

Technically, this is under 240 meters which should make it Scale 3, but it does seem to have enough mass to rate Scale 4. Besides, I don't want to downgrade such an iconic Star Trek ship. Its published stats say it's Scale 4 and thus a match for a TOS Scale 4 Constitution. It's more trouble to change than it's worth.

Klingon D4 Battlecruiser (John Eaves Concept)

Scale 3

145m in length

Klingon Bird-of-Prey (22nd C)

Scale 3

145m in length

Klingon Qugh-class

Scale 7

1,360.5m in length

Klingon Raptor

Scale 3

145m in length

Klingon Batlh-class

Scale 5

418.26m in length

Romulan Warbird D'deridex-class

Scale 7

1,353m in length

Romulan Scout

Scale 3

89m in length

Romulan Science Vessel

Scale 4

300m in length

Klingon Battlecruiser D7-class (ST: Discovery)

Scale 5

503m in length

Beacon of Kahless

Scale 3

120m in length

Klingon IKS Negh'Var

Scale 6

682.32m in length

Goroth's Klingon Ship

Scale 2

88m in length

Klingon Chorgh-class

Scale 5

418.26m in length

Klingon Cleave Ship

Scale 7

934.5m in length

Klingon D5-class

Scale 3

155m in length

Klingon Transport

Scale 2

55m in length

Romulan Bird-of-Prey (22nd C)

Scale 3

130m in length

Romulan Bird-of-Prey (23rd C)

Scale 3

131m in length

Klingon IKS Mogh-class (Star Trek Online)

Scale 7

1,126m in length

Klingon Qoj-class

Scale 7

1,108.7m in length

Klingon Rugments' Ship

Scale 2

70m in length

Klingon K't'inga-class Battlecruiser

Scale 4

214m in length

As with the TOS D-7 Klingon cruiser, this is under 240 meters which should make it Scale 3, but it does seem to have enough mass to rate Scale 4. Besides, as with the D-7 above, it's too much trouble to change such an iconic ship.

Klingon Vor'cha-class

Scale 5

481m in length

Klingon Battlecruiser D7-class (Kelvin Timeline)

Scale 4

350m in length

Klingon B'rel-class Bird-of-Prey

Scale 3

139m in length

Romulan RRW Vastam (Star Trek Online)

Scale 7

974.4m in length

I was wavering between Scale 6 or 7 for the *Vastam* since it's significantly larger than a *Galaxy* (Scale 6) but not quite as large as a *D'deridex* (Scale 7). What convinced me that the *Vastam* was Scale 7 is the fact (according to Memory Beta) that it has the same crew complement as the *D'deridex*: 1,500 crewmembers.

Orion Interceptor

Scale 3

150m in length

Klingon DaSpu'-class

Scale 5

527.3m in length

Klingon IKS Mat'ha (Star Trek Online)

Scale 4

312m in length

Cardassian Galor-class

Scale 4

371.88m in length

Cardassian Keldon-class

Scale 4

371.88m in length

Klingon Bird-of-Prey (ST: Discovery)

Scale 3

188.7m in length

Cardassian Hideki-class

Scale 2

85.78m in length

Baran's Raider

Scale 3

220m in length

Romulan Warbird "Valdore" Valdore-type

Scale 6

605.5m in length

Reman Warbird "Scimitar"

Scale 8

890m in length

The Scimitar doesn't have the length for Scale 8, but it is wide enough and massive enough to rate as Scale 8.

Voth Research Vessel

Scale 3
130m in length

Orion Scout Ship (22nd C)

Scale 3
110m in length

Void Ship

Scale 2
75m in length

Jem'Hadar Fighter

Scale 3
95m in length

Bajoran Solar Sailor

Scale 2
49m in length

Bajoran Assault Vessel

Scale 3
140.72m in length

Merchantman

Scale 3
150m in length

Jem'Hadar Battleship

Scale 8
1,500m in length

Scale 8 because this thing is at least as massive as Deep Space 9.

Cardassian Groumall

Scale 3
256m in length

Long and thin hull making up all of its length and doesn't have the mass to be Scale 4, so Scale 3.

Cardassian Orbital Weapons Platform

Scale 3
120m in diameter

Promellian Battlecruiser

Scale 6
600m in length

I was wavering between Scale 5 and 6 for the Promellian Battlecruiser. This ship seems to just straddle the border between scales. It doesn't quite strike me as massive enough as a *Galaxy* (Scale 6) but its length of 600 meters just puts it over the top to reach Scale 6 in my humble opinion.

Nightingale

Scale 4
320m in length

Borg Sphere

Scale 7
600m in length

Technically shorter than a Scale 6 *Galaxy*, but it's a *sphere*, so it outmasses a *Galaxy*, thus Scale 7. This matches its published stats in the *Delta Quadrant Sourcebook* anyway.

Bajoran Freighter

Scale 4
250m in length

Deep Space 9 (Cardassian Nor-class Space Station)

Scale 8
1,451.82m in length

See DS9's entry in the Massive Comparison Chart for further explanation of its Scale.

Ferengi Marauder D'Kora-class

Scale 4
366m in length

Ferengi Ship (22nd C)

Scale 2
55m in length

Jem'Hadar Vanguard Carrier (Star Trek Online)

Scale 8
1,433m in length

Andorian Battlecruiser

Scale 4
360m in length

Assimilated Arctic One

Scale 2
80m in length

Borg Probe

Scale 3
180m in length

Tsunkatse Arena Starship

Scale 6
710.7m in length

Hirogen Warship

Scale 3
150m in length

Jem'Hadar Battle Cruiser

Scale 6
639.75m in length

Hirogen Holoship

Scale 3
200m in length

Karemma Starship

Scale 4
380m in length

Tarellian Starship

Scale 5
560m in length

Kazon Raider

Scale 3
160m in length

Gomtuu

Scale 6
600m in length

Sheliak Colony Ship

Scale 4
330m in length

USS Dauntless NX-01-A

Scale 3
204.82m in length

Gorn Ship

Scale 3
220m in length

Breen Warship

Scale 4
330m in length

Nausicaan Fighter

Scale 2
90m in length

Son'a Flagship

Scale 4
354m in length

Tamarian Deep Space Cruiser

Scale 6
700m in length

Borg Queen's Ship

Scale 7
820.4m in length

This is *not* the Borg Octahedron depicted in the *Delta Quadrant Sourcebook* (page 78). That book gives the Octahedron a Scale of 14 and states that it is ten kilometers long on its longest axis. Modiphius likely screwed up. Why? According to *The Official Starships Collection Magazine*, Issue 109, the Borg Queen's Ship is much smaller than a Borg Cube and is slightly larger than a Borg Sphere. As such, with its official length of 820.4 meters, I've rated it Scale 7. Of course, there's nothing stopping anyone from using the Octahedron depicted in the *Delta Quadrant* book as a Borg field command vessel or something similarly sinister....

Malon Export Vessel

Scale 5
515m in length

Husnock Warship

Scale 8

1,300m in length

Roughly the same length as a Scale 7 *D'deridex*, but is at least twice the mass, so Scale 8.

Krenim Temporal Weapon Ship

Scale 8

1,550m in length

Krenim Warship

Scale 5

500m in length

Xindi-Primate Starship

Scale 4

200m in length

Xindi-Insectoid Warship

Scale 3

150m in length

Xindi-Insectoid Fighter

Scale 3

140m in length

Tellarite Cruiser

Scale 3

200m in length

Xindi-Reptilian Warship

Scale 3

150m in length

Smuggler's Ship

Scale 5

500m in length

Axanar Cargo Ship

Scale 2

92m in length

Devore Warship

Scale 7

800m in length

I rated the Devore as a Scale 7 as it seems to outmass the Scale 6 *Negh'Var* and is longer as well.

Mondor

Scale 5

470m in length

Batris

Scale 4

290m in length

Xindi-Aquatic Cruiser

Scale 9

1,900m in length

Lokirrim Warship

Scale 3

180m in length

Guliban Freighter

Scale 2

55m in length

Vidiian Starship

Scale 5

500m in length

Vidiian Warship

Scale 4

300m in length
