Commander Thomas ‘Tom’ Kazan is a dashing and cocky officer who excels in piloting. He is fearless and up for the boldest strategies and daredevil feats, but takes care not to jeopardize his ship and crew without cause. His motto is: “If it moves, I can fly it.” He is loyal and dependable, but has a competitive nature that sometimes puts him in hot water.

Lieutenant Sonok has had a varied career in Starfleet. He has previously worked for Starfleet Intelligence in cryptography and data analysis, as well as in Shipyard Operations as an administrator. But his current role as Chief Science Officer seems to fit him best, given his expertise in advanced mathematics and Vulcan culture. The crew calls him ‘the walking encyclopedia’, which isn’t far off the mark.

Commander Edon Li is half-Bajoran on his mother’s side, and half-human on his father’s side, growing up on a Federation starship. He has taken his father’s last name, Li. A stickler for maintenance, Li considers his starship and its crew his home. He adheres to Bajoran beliefs, though he feels more distant from his religion because of his upbringing away from Bajor. He has been granted permission to wear his Bajoran earring.

Lieutenant (j.g.) Vog’rr transferred to the ship quite recently, and serves as Alpha Shift’s flight controller. Vog’rr is a Caitian of few words, letting his actions speak for themselves. He is most animated when he plays sports, especially Parrises Squares or facing off against someone in an anbo-iyutsu match.

Ctrl.10 Dar.11 Fit.9 Ins.9 Pres.9 Reas.8 / Cmd.2 Conn.2 Sec.5 Eng.1 Sci.2 Med.4 // Hand-Held Phasers, Xenobiology, Ship Engagement Tactics, Emergency Medicine, _____, _____ // Andorian

Lieutenant Commander Zhotava is a proud daughter of Andoria. Strongly believing that no one gets left behind, she was once a combat field medic. She is fiercely dedicated to her current role as Chief of Security. She is an experienced fighter with the Andorian blade known as the Ushaan. She wears an Andorian baldric as permitted cultural attire. She is fascinated by xenobiology as it teaches her both how to heal...and how to efficiently subdue different lifeforms.

Ceri Lantham is a Troglyte Ardanan who joined Starfleet initially as a geologist in the Science Division, but her expertise in mission planning had been noticed, and she was offered an opportunity to transfer to Ops. Though hesitant at first, she decided to see if the Operations Track fits her. She is still intimidated working with the senior staff, however.

Ctrl.9 Dar.8 Fit.9 Ins.9 Pres.10 Reas.11 / Cmd.2 Conn.1 Sec.2 Eng.4 Sci.3 Med.4 // Cybernetics, Rehab Medicine, Cosmetic Alterations, Cellular Biology, _____, _____ // Saurian

New to the CMO position, Lieutenant Baxter (or Baxyn’kash in Saurian) is more comfortable with cybernetics and rehabilitation medicine than with emergency medicine, but has pushed himself to rise to the challenge. He is an expert in creating realistic prosthetics and cybernetic disguises for undercover missions, and his surgical skills are worthy of respect. He gets a thrill from away team missions.
